

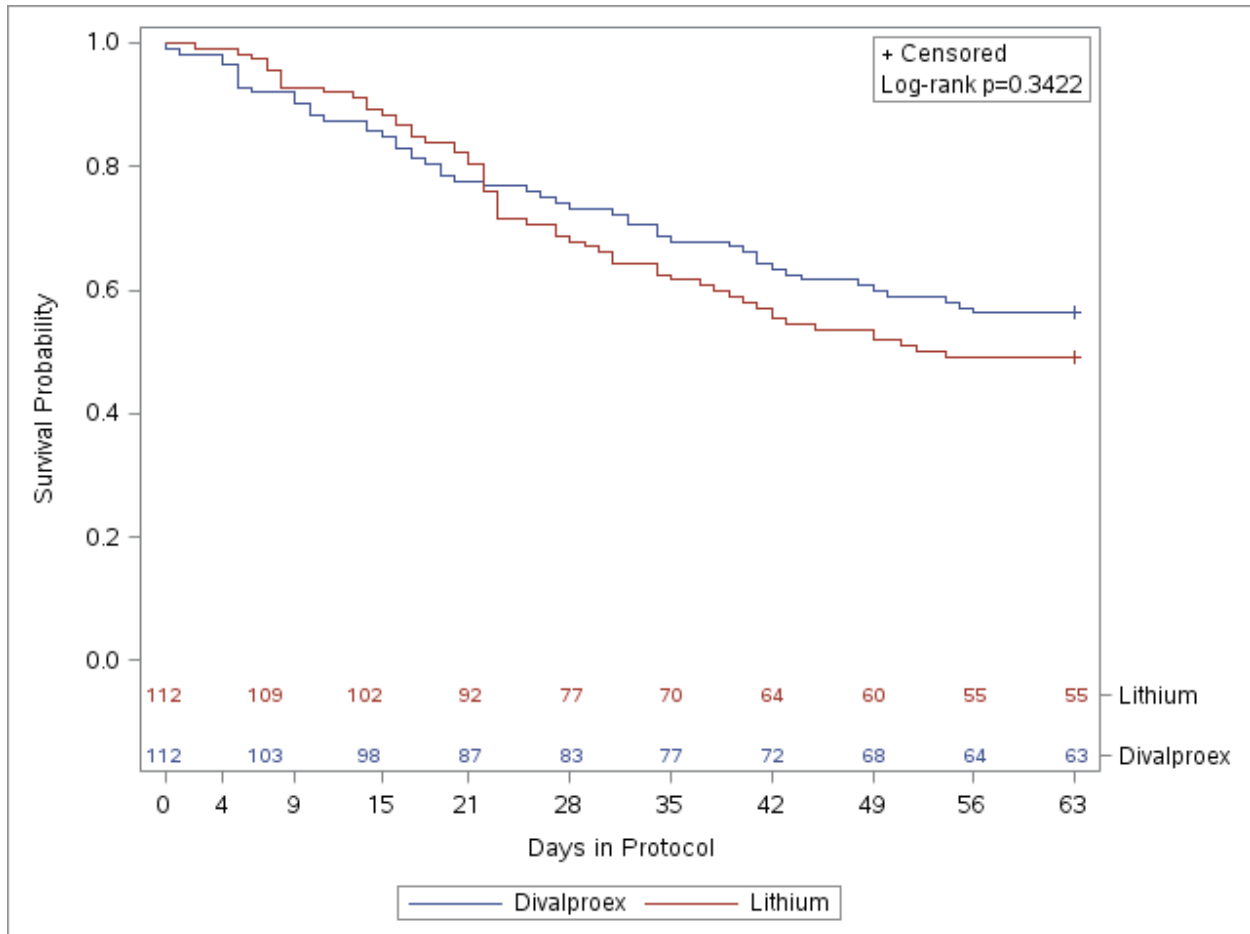

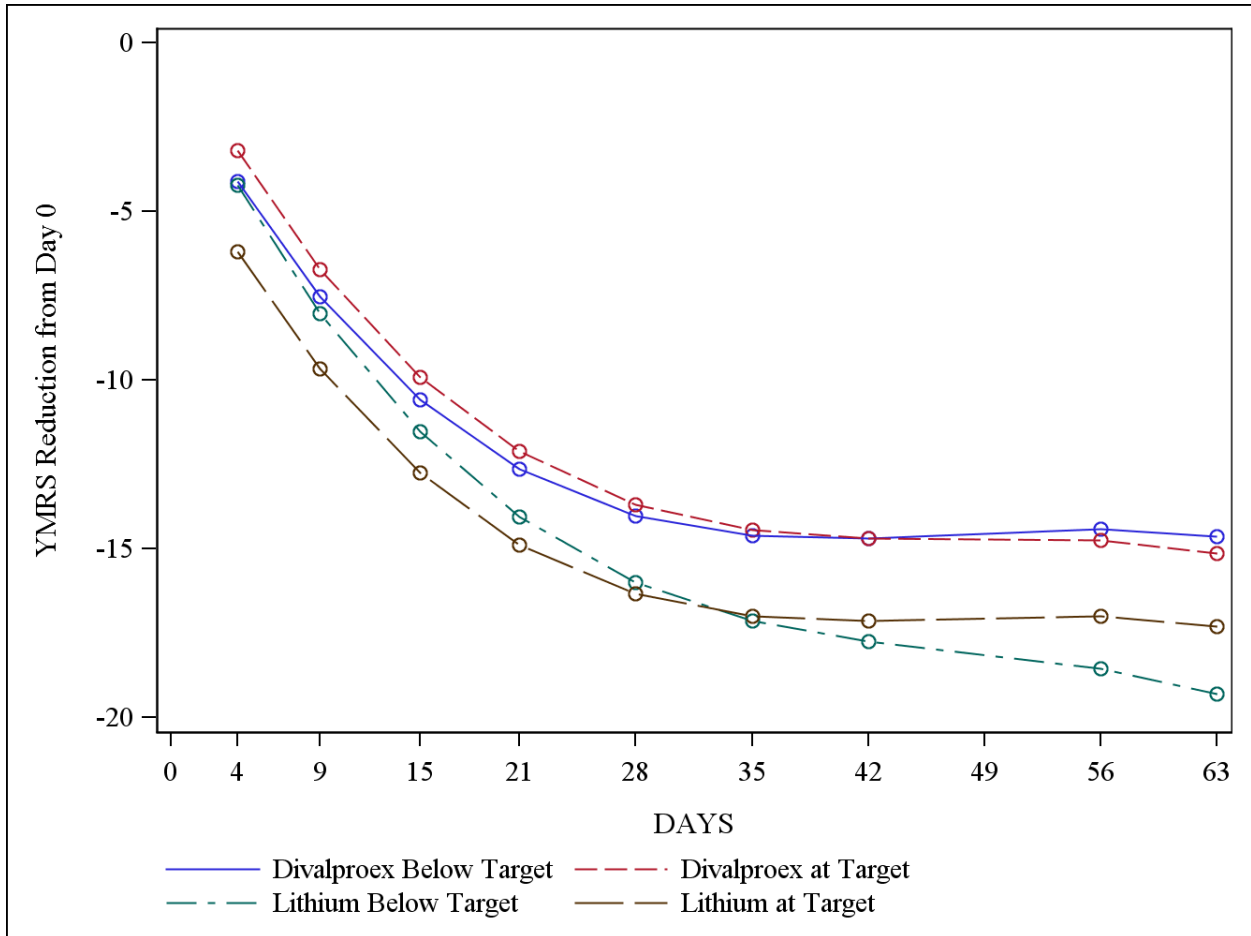

**FIGURE S1.** Kaplan-Meier Curve of time to attrition for two treatment groups

Kaplan-Meier estimates of survival probability for time to attrition of two treatment groups. Number of subjects at risk shown at the bottom of the figure and the p value of the log-rank test (between two treatment groups) shown in the top-right corner inset.

**FIGURE S2.** Young Mania Rating Scale (YMRS) reduction from baseline based on four groups – treatment groups and target serum concentration

The four lines correspond to Least Square Means (from mixed models) of YMRS Change from Day 0 for four groups based on treatment assignment and whether target serum concentration met concurrently.
